CHARACTER CONCEPT / 01

WAYPOINT

Lunar field survey unit

A quiet little scout with a copper visor, heavy boots, and a perfectly serious way of losing its balance.

A scout with a soft landing

The proportions make it approachable. The way it carries itself makes it a scout.

36%

BOT CROSSING

Keep the weight of a little character walking through a real 3D colony. Boots land on the deck, turns read from above, and every pose is clear at colony zoom.

33%

WOBBLY LIFE

Let the suit catch up after the feet stop. Broad arm swings and one little correction make an ordinary arrival funny, even with a blank face.

31%

MARS MISSION

Take the mystery of a sealed visor and the readiness of a uniformed scout. Give Waypoint its own helmet profile, collar, and color blocking.

FIRST IMPRESSION

From across the colony, you see the fin, visor and sash. Up close, you notice the ribbed collar flex and the copper visor catch the habitat lights. Then the scout stops a little too quickly and tries to make it look deliberate.

Bot Crossing source

Wobbly Life / RubberBandGames

Mars Mission astronaut / BrickLink

The pressure suit

Three views establish the silhouette, the material breaks, and the one-sided helmet fin.

01 / FRONT

Copper visor, orange sash

02 / PROFILE

Ribbed collar, rocker soles

03 / BACK

Teal wedge pack, amber pinlight

Boots first. Helmet second.

Four beats for a normal walk-to-stop. The collar tap makes the recovery look intentional.

01 / STRIDE

Heel leads. The opposite arm swings wide.

02 / PLANT

Boots settle. The helmet pitches forward a beat later.

03 / CATCH

Hips shift back. Mitts flare out once for balance.

04 / REPORT

Stand tall again and tap the collar.

A new body on familiar ground

One viewer-only prototype can show whether Waypoint reads as its own character.

01 Keep the colony behavior

Keep pathing, deck contact, camera scale, selection, and existing agent status cues. The movement system owns where the character goes and when it stops.

02 Own the silhouette and the timing

Build a fresh mesh and rig around the fin, visor, diagonal chest panel, wedge pack, and rounded boots. Use the dark mitts from the cover and keep the sash flush to the suit.

03 Prove it at colony zoom

Start with idle, walk, and the four-beat stop. Compare Waypoint beside the current astronaut on the same path. Check for foot sliding, readable gestures, and visible status badges.

MATERIAL PALETTE

- **Bone ceramic**
- **Smoked copper**
- **Persimmon panel**
- **Petrol teal**
- **Graphite ribbing**

Use broad color blocks so the profile survives small screen sizes.

FIRST PROTOTYPE

Use the existing animation picker as the test scene. Reuse the renderer and clip playback conventions, then give Waypoint its own mesh, materials and three authored motions.
